

## Model Optimization and Tuning Phase Template

Date	20 November 2025
Team ID	739946
Project Title	Deepfruitveg:Automated Fruit And Vegetables Identification
Maximum Marks	10 Marks

### Model Optimization and Tuning Phase

The Model Optimization and Tuning Phase of Deepfruitveg involves fine-tuning hyperparameters, adjusting learning rates, enhancing model architectures, and applying regularization techniques to improve accuracy and performance for fruit/vegetable identification.

### Hyperparameter Tuning Documentation (8 Marks):

Model	Tuned Hyperparameters
<b>Convolutional Neural Network (CNN)</b>	<ul style="list-style-type: none"> <li>- Learning Rate: 0.001</li> <li>- Batch Size: 32</li> <li>- Epochs: 50</li> <li>- Dropout Rate: 0.3</li> <li>- Optimizer: Adam</li> <li>- Activation Function: ReLU</li> </ul>
<b>Transfer Learning (VGG16, AlexNet)</b>	<ul style="list-style-type: none"> <li>- Learning Rate: 0.0001</li> <li>- Epochs: 50</li> <li>- Fine-tuning layers: Last 4 layers</li> </ul>

	<ul style="list-style-type: none"> <li>- Batch Size: 32</li> <li>- Optimizer: Adam</li> </ul>
<b>MobileNet</b>	<ul style="list-style-type: none"> <li>- Learning Rate: 0.0005</li> <li>- Batch Size: 32</li> <li>- Epochs: 100</li> <li>- Optimizer: Adam</li> <li>- Dropout Rate: 0.2</li> <li>- Learning Rate Decay: 0.96</li> </ul>

**Final Model Selection Justification (2 Marks):**

<b>Final Model</b>	<b>Reasoning</b>
<b>ResNet (Residual Network)</b>	ResNet offers the best balance of accuracy, efficiency, and scalability for automated fruit and vegetable identification, making it the optimal model.
